#### 1. Activity Live Cycles

#### a. Source Code

```
public class MainActivity extends AppCompatActivity {
@Override
protected void onCreate(Bundle savedInstanceState) {
   super.onCreate(savedInstanceState);
   setContentView(R.layout.activity main);
   Log.d( "lifecycle ", "onCreate invoked ");
   Toast.makeText( this, "onCreate invoked", Toast.LENGTH_SHORT).show();
@Override
protected void onStart () {
   super.onStart();
   Log.d("lifecycle", "onStart invoked");
   Toast.makeText(this, "onStart invoked", Toast.LENGTH SHORT).show();
@Override
protected void onResume () {
   super.onResume();
   Log.d("lifecycle", "onResume invoked");
   Toast.makeText(this, "onResume invoked", Toast.LENGTH SHORT).show();
}
@Override
protected void onPause () {
  super.onPause();
   Log.d("lifecycle", "onPause invoked");
   Toast.makeText(this, "onPause invoked", Toast.LENGTH SHORT).show();
@Override
protected void onStop () {
   super.onStop();
   Log.d("lifecycle", "onStop invoked");
   Toast.makeText(this, "onStop invoked", Toast.LENGTH SHORT).show();
}
@Override
  protected void onRestart () {
  super.onRestart();
  Log.d("lifecycle", "onRestart invoked");
  Toast.makeText(this, "onRestart invoked", Toast.LENGTH SHORT).show();
}
@Override
protected void onDestroy () {
   super.onDestroy();
   Log.d("lifecycle", "onDestroy invoked");
   Toast.makeText(this, "onDestroy invoked", Toast.LENGTH SHORT).show();
}
```

#### b. Hasil Running Program

• Open Apps >> Close Apps (Back Button) >> Open Apps

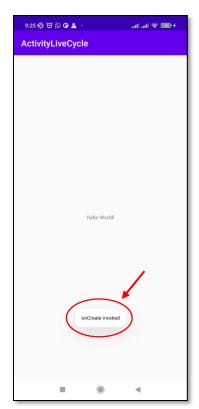

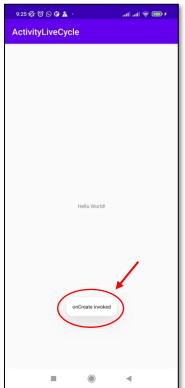

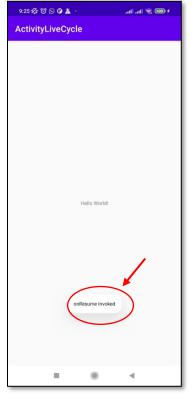

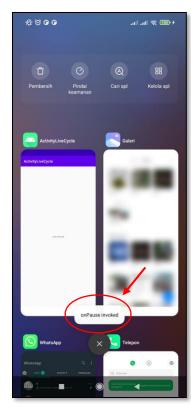

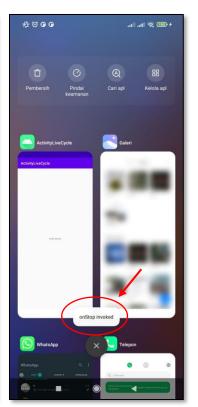

• Open Apps >> Minimize Apps >> Open Apps >> Close Apps (Back Button)

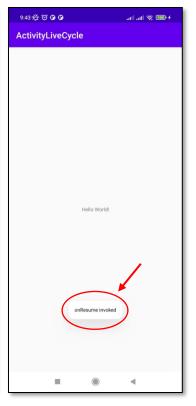

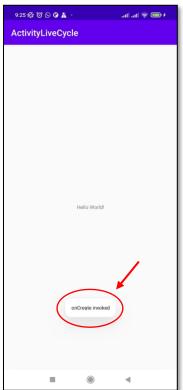

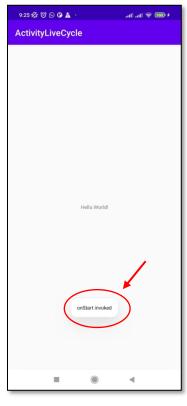

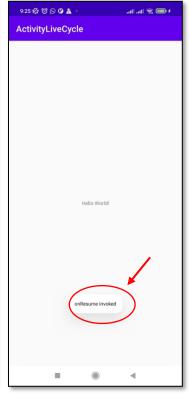

• Open Apps >> Switch to Another Apps >> Open Apps >> Close Apps (Back Button)

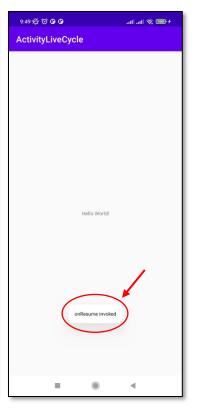

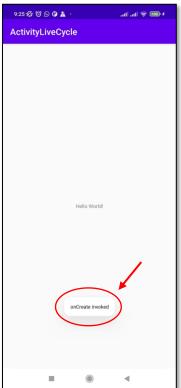

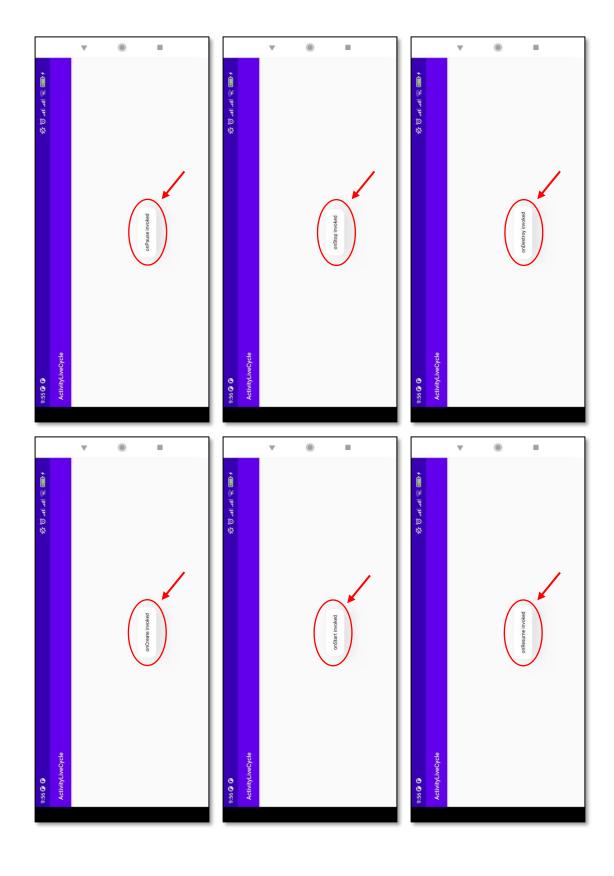

# • Open Apps >> Rotate Apps

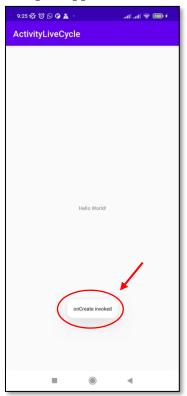

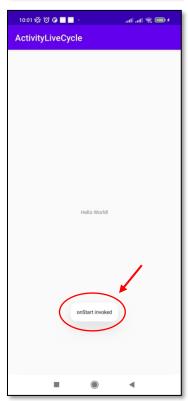

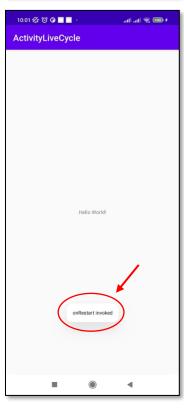

• Open Apps >> Lock/ off Screen >> Unlock/ on Screen

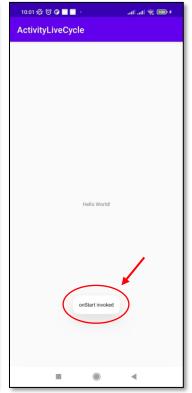

#### c. Analisis

Dari praktikum yang telah dilakukan, saya bisa menyimpulkan penggunaan method pada aplikasi diantaranya adalah:

- *OnCreate()*. Method ini dipanggil ketika pertama kali membuat activity. Method ini juga memberi bundle yang berisi status aktivitas yang sebelumnya dibekukan jika ada, dan selalu diikuti oleh method onStart().
- *OnStart()*. Method ini dipanggil saat user mulai melihat activity. Method ini juga selalu diikuti oleh method onResume jika di layar depan muncul activity.
- *OnResume()*. Method ini dipanggil saat activity mulai berinteraksi dengan pengguna. Activity yang dilakukan berada pada bagian atas tumpukan activity dan selalu diikuti oleh method onPause().
- *OnPause()*. Method ini dipanggil sebagai bagian dari activity lifecycle ketika sebuah activity berpindah ke bagian sebelumnya tanpa dimatikan.
- *OnRestart()*. Method ini dipanggil setelah activity dihentikan, sebelum dimulai lagi yang selalu diikuti oleh method onStart().
- *OnStop()*. Method ini dipanggil ketika activity tidak terlihat oleh user. Jika memori rendah, mungkin method ini tidak akan dipanggil.
- *OnDestroy()*. Method ini dipanggil sebelum activity dihilangkan, karena activity sudah selesai dan digunakan untuk menghemat ruang memori.

#### 2. Home Fan

#### a. Source Code

#### MainActivity.java

```
package com.example.homefan;
import androidx.appcompat.app.AppCompatActivity;
import android.animation.*;

```

# b. Hasil Running Program

• Potrait

### • Landscape

#### c. Analisis

- Untuk mengatur layout pada layar diperlukan constraint untuk mengaturnya.
- Kemudian, untuk membuat gambar kipas bisa bergerak/ berputar, maka kita harus menggunakan library **ObjekAnimator.**
- Dari program yang telah saya buat, untuk menghidupkan kipas supaya bisa berputar, saya menggunakan toogleButton yang nantinya deprogram untuk mengatur kapan gambar berputar dan kapan gambar berhenti berputar.
- Selain itu, saya juga menggunakan tombol **checkbox** untuk mengatur kecepatan dari kipas.
- Untuk mengatur kecepatan, kita bisa menggunakan **duration** ketika gambar bergerak. Semakin kecil nilai dari duration, maka gambar akan bergerak lebih cepat.
- Selanjutnya, untuk membuat program flexible dengan layar hp yang digunakan, maka disini saya membuat 2 layout yang mana berfungsi untuk layout portrait dan layout landscape.
